SINGAPORE, Clark Quay

Novotel Clark Quay Hotel

Novotel Clark Quay Singapore with 406 rooms is situated along banks of the Singapore River, which offer a blend of entertainment, shopping and dining experiences. Sited adjacently to the hotel, Liang Court shopping complex is popular with the Japanese community in Singapore with a wide variety of Japanese goods and services.

Novotel Clark Quay's banquet halls and function rooms on the fifth and sixth floor have floor to ceiling bay clear-glass windows which was previously coated with a competitor's film. However, with the heat gain from the afternoon sun, the competitor's film failed to live to its expectations.

As the banquet halls and function rooms are overlooking the Clark Quay view, Novotel wanted a solar film that has high clarity and effective heat rejecting properties. The IQue team (that's us) was brought in and after conducting and presenting detailed energy study to the management of Novotel, 73FG (V-KOOL 70) was selected.

Upon completion of installation, Novotel experienced a reduction of accumulation of heat, resulting in energy savings as well as reducing extra loading to the air-conditioning system. The 2,000 sq.ft project required just 3 days to finish. Oh, did we mention that it included removing our rival's film as well?
